

**Today, we have a strong organisation.
Our company is AAA-rated, and we are
well known for having a high CSR profile.**

Nowadays, Dalby Mølle A/S is a privately-owned mill, situated in beautiful surroundings close to Kolding and is run by Managing Director Claus Sønniksen and Production Manager Hans Peter Petersen.

Dalby Mølle's roots go all the way back to the Middle Ages when it operated as a grist mill. In 1930, it started producing oatmeal. The present buildings date from 1857 and were renovated and expanded in the 1980s. The production equipment dates from 1992 and is modernised regularly.

Quality and value for our customers

At Dalby Mølle we only work with one thing: the production and packaging of cereal products and other specialist products – on the other hand, we are able to handle more or less all production processes for all types of cereal products. We can, for example, mill, cut, grind and steam. It is primarily oats we process, but in recent years, consumers have discovered an array of new products which we have started producing. For example, spelt, millet, rye and barley.

Common to all our products is that, as an IFS-certified company, we supply a consistent, high quality every time. Our customers are our business partners, and our most important job is to establish the customer's needs and offer them solutions that match these needs.

For some of our customers we merely package the product in bags while for others we are responsible for both the production and the packaging. Irrespective of the type of agreement we enter into, all of our customers are afforded the same seriousness and high standard of service. We use our know-how to advise the customer on optimised solutions which improve the product and their bottom line.

All types of product size

Dalby Mølle can supply cereal products in any size of bag familiar to the market.

- **0.5 kilo and 1.0 kilo bags**
- **5 and 25 kilo sacks**
- **Big bags of approximately 600 kilos**
- **Bulk**

If you have any special requests, we can almost certainly manage these too. Contact us with any enquiries you may have regarding packaging.

Innovative Business partner

Our primary product is the processing of oats, which we can rough grind or fine grind. The bulk of the oats we process are organic. In our production hall housing modern equipment, we are able to handle number of specialist tasks, for example:

- Processing of pearled barley
- Processing of rye
- Processing of millet
- Production of gluten-free products

We work with the largest retail chains in Denmark and Germany, but we are also renowned for entering into innovative partnerships with smaller companies who concentrate on niche markets i.n the field of cereal products. We are keen to help explore new avenues. Contact us to hear what we can offer in terms of a customised agreement. Here, we can contribute with invaluable know-how in the various parts of the value chain.

The consumer creates demand through concept production

Dalby Mølle has entered into a strategic partnership with DLG on attitude-based crop production, also known as concept production. DLG is owned by 30,000 Danish farmers and, in recent years, the company's management has worked tirelessly on the development of concept production, which brings increased value to the individual farm and ensures raw ingredients for industry with the desired CSR profile.

"The concepts are diverse and are created on the basis of options available to the consumer and their wishes. It may be, for example, that through their consumption of staple goods, the consumer wishes to strengthen biodiversity in nature by purchasing products which embrace a concept involving, for example, the planting of living hedges around the fields, which takes into account the area's bird life. The concepts can encompass a broad palette of raw ingredients, including oats, bread grain, rapeseed and various specialist products for the food industry. Over the last five years, DLG has experienced increased demand for crops with a stronger CSR profile than the group was able to offer previously. Consequently, we have established a department that tells the story of production – and many companies, including Dalby Mølle, have welcomed this. We are keen to enter into a dialogue with anyone who may be interested in concept production."

Jakob Helm Larsen, Product Manager for concept production, DLG

Responsibility for the environment and for people

It is not only our customers we are able to offer a stronger CSR profile. At Dalby Mølle we ourselves take responsibility for the environment and for people. We have recently implemented an energy-saving project in our production equipment which means that we save the environment 720,000 kWh in electricity consumption annually.
